PROFESSIONAL SUMMARY

Senior Software Engineer specializing in building distributed, scalable, and highly maintainable systems. My core strength lies in combining solid software architecture foundations (**Hexagonal Architecture, Domain-Driven Design, and SOLID Principles**) with cutting-edge AI capabilities (**Hybrid RAG, Autonomous Agents, and LLM Orchestration**). Focused on delivering clean, decoupled, production-ready software built for high-traffic environments.

PROFESSIONAL EXPERIENCE

Loadify — Lead AI Engineer Oct 2025 – Present | Remote

- Architected an autonomous agent system based on ReAct cycles and Tool-Calling to automate complex logistics operations.
- Integrated real-time voice agents using RetellAI and developed complex asynchronous workflow orchestrations in n8n.
- Key achievement:** Reduced manual operational workload by 90%, ensuring high availability and cost-optimized LLM consumption.

Cercademi — Lead Full Stack Developer Mar 2024 – Oct 2025 | Remote

- Led the end-to-end development of a mission-critical medical appointment ecosystem, guaranteeing high availability.
- Implemented secure payment orchestrations via MercadoPago and optimized SQL database queries for high-concurrency workloads.
- Key achievement:** Significantly reduced technical debt by planning and executing system migration to a modular TypeScript architecture built on SOLID principles.

Argxp — Full Stack Developer Jul 2023 – Feb 2024 | Remote

- Developed 2 high-traffic web applications from scratch working under agile SCRUM methodology.
- Designed and implemented reusable UI component libraries and established efficient CI/CD deployment pipelines.
- Key achievement:** Ensured 99.9% production uptime by optimizing continuous deployment workflows and rigorous unit testing.

FEATURED PROJECTS

TLDR Bot — RAG Assistant & Hexagonal Architecture t.me/tldr_ai_pro_bot 2024 – 2025

- High-precision Telegram RAG system refactored using **Hexagonal Architecture (Ports & Adapters)**, decoupling core domain logic from presentation channels and LLM providers.
- Implemented Hybrid Search (combining semantic pgvector and lexical tsvector) with Re-ranking layers to maximize relevance and minimize token costs.

Event-Driven Microservices Architecture [GitHub](#) 2024

- Scalable backend ecosystem using NestJS and NATS Broker for event-driven inter-service communication. Implemented hybrid persistence (PostgreSQL + MongoDB) and Stripe integration, containerized with Docker.

CORE EXPERTISE & SKILLS

Software Architecture

Hexagonal Architecture (Ports & Adapters), DDD, SOLID Principles, Design Patterns, Event-Driven Microservices

AI Engineering & Automation

Hybrid RAG (pgvector + tsvector), Autonomous Agents (ReAct), OpenAI, Gemini, RetellAI (Voice AI), n8n

Fullstack & Backend

TypeScript, Next.js (App Router), React, NestJS, Node.js, Zustand, Tailwind CSS

Databases & Cloud

PostgreSQL, Redis, MongoDB, Supabase, Prisma ORM, Docker, CI/CD Pipelines

EDUCATION & LANGUAGES

Software Engineering (Self-Taught)

Continuous specialization in Fullstack development, clean architecture, and production-grade AI solutions (2020 – Present).

Languages

Spanish: Native | **English:** Advanced (B2/C1 Professional)
